

I. Herbalife Nutrition Provides Consumer Choice

Herbalife Nutrition is committed to understanding and meeting consumer needs, and recognizes that some consumers prefer foods made from non-bioengineered or non-genetically modified (“GM”) ingredients. Where feasible, the Company strives to give consumers a choice about the use of non-GM ingredients and offers products that do not contain GM ingredients. We make decisions about the use of ingredients at the local level, tailoring each decision to the needs and desires of each local market.

II. Transparency

In markets where there is a labeling requirement for GM ingredients or products, Herbalife Nutrition makes those disclosures.

III. Scientific and Regulatory Bodies Regard Genetically Modified Ingredients as Safe

GM technology has been widely used for more than 20 years as crops using this technology require fewer pesticides, less water, reduce carbon emission, and keep production costs down. National and international health authorities have undertaken rigorous evaluation of GM ingredients related to both human and animal health and there is broad consensus among authoritative bodies around the world that GM ingredients that have been approved in marketplace are as safe as their non-GM counterparts and there are no negative health effects associated with use of GM ingredients.

IV. Our Commitment

At Herbalife Nutrition, providing consumers with choice is at the heart of everything we do as we believe consumers should make the decisions that are best for them. We commit to providing our customers with choice and continuously providing non-GM alternatives where there is demand and is feasible.
